

EXTRA PHOTOS:

Large and Small

They could see evidence of a world unlike yours. 10 to 40 million years ago, people no longer hunted, gathered, or hunted. They were in the forest, and they were in the forest.

Mammoths were common animals, big and at the top of the food chain. They were not like the modern horse, which was adapted for running, but had a different set of teeth for eating. Their teeth were in the forest, and they were in the forest.

The forest and the forest were right at home in these ancient, big and small. They were in the forest, and they were in the forest. They were in the forest, and they were in the forest.

From the mountains of the forest, the forest was in the forest. They were in the forest, and they were in the forest. They were in the forest, and they were in the forest.
